

Duprinters

Digital duplicators

When you need to produce large amounts of print at minimum cost

What could they do for you?

Duplo Duprinters are modern digital duplicators offering an alternative solution to both copiers and small offset presses. They are easy to use and offer fast printing speeds at very low cost per copy.

Money saving

They are most economical on print runs of 30-5000 prints with a cost-per-copy that actually falls as the run-length increases. For users producing mid to high volumes of print the savings can be dramatic. For runs less than 30 then carry on using the photocopier.

There's no click rate to pay!.

Print-on-demand

Duprinters have the appearance and user-friendliness of a photocopier, combined with the speed and print technology of a printing press.

They are ideal for producing a large range of print including stationary, forms, leaflets, mailers, classroom hand-outs, carbonless forms, newsletters, instruction sheets, manuals, envelopes etc etc.

The straight paper path means far fewer paper jams than a copier and a much wider variety of stocks including paper from 50-210gsm, card, envelopes even windowed ones.

Environmentally Friendly

Energy efficient and could save you up to 75% off your energy bill compared to using an equivalent toner copier running the same work.

Duprinters are amongst the greenest print machines in the world. They use a very low energy consumption even when running at full speed. The print process is completely heat free with no need for a lengthy warm-up. Duprinters use environmentally friendly soy ink, paper printed with soy ink is also easier to recycle. Duprinters also have zero ozone emissions.

Speed

Fast print speeds up to 150ppm is comfortably faster than all but the very top end photo copiers.

Clean

Duprinters only use ink and masters. Used masters have an automatic removal system and ink cartridges are easy to remove.

Computer or hardcopy originals

Print direct from computer, some models have USB PC or Mac connection as standard others have it as an optional extra. There is also an optional network connection for multiple computers.

Fully featured

You'll find all usual enlargement/reduction, Zoom, print darkness adjustments, shadow erase and a lot more.

Colour

There is no need to be restricted to Black and White, a wide range of colours are available. To use another colour or spot colour allows you more flexibility. Switching colours only takes a matter of seconds with the optional colour drums. Two colour jobs can be completed with a second run through the machine.

Training

Duprinters require no specialist operator. They are designed with office users in mind, they look like photocopiers and the control panel is user friendly and simple to use.

Servicing

It is widely acknowledged that photo copiers require frequent servicing/maintenance. Duprinters require very little maintenance as there's no heat involved and the paper path is straight.

Costs of print

Some example guide prices for print jobs. Obviously there are variations from job to job regarding coverage.

On an A4 machine

1000 A4 print run single colour = £1.50

5000 A4 print run single colour = £8.85

On an A3 machine

1000 A3 print run single colour = £3.00

5000 A3 print run single colour = £13.77

If you have a guillotine then 2-up A4's onto an A3 sheet for bigger savings not forgetting the time saving.

So what can't they do?

Full colour printing (options laser, colour copier, offset press, digital press).
Printing on gloss art papers (use an offset litho press or high-end digital press).

Models to choose from

A4 paper size printers

DP C105

DP 210E

DP 220E

A3 paper size printers

DP J450

DP S550

DP S850

DP 460H (suction feeder)
